how I work

I design interfaces and then build them. Working across both sides means fewer decisions get lost between the mockup and the shipped screen.

Research

I start from the people using the thing: what they came to do, where they get stuck, what they already expect from similar products.

Interaction

Flows and states before pixels. What happens on empty, on error, on the slow connection — designed, not left to chance.

Visual

Type, spacing and colour as a system, not per screen. Built in Figma, handed off in a way a developer can actually implement.

“My designs focus on ease of use and accessibility.”

Fle Cookies

Ordering app — design and build

The app doesn't replace the chat. It writes the message.

- Figma
- Mobile-first
- User flows
- Design system
- WhatsApp commerce

A home bakery that sells only through WhatsApp, where every order began as a blank chat: five buttons opened the same empty conversation and the customer described what they wanted from scratch.

- ▶ Six screens ending in a review step that shows the exact message before it is sent.
- ▶ Built from the brand’s own asset kit, not from its website — which turned out to be a reinterpretation.
- ▶ I rebuilt the live landing page as well: the five WhatsApp CTAs were white on green at 1.98:1, failing every WCAG level.

LANDING REBUILD, AUDITED

0 contrast failures	0 targets under 44 px	0 images without alt

Simply Shopping

Mobile app – UX/UI

A mobile-first e-commerce app built around discovery. The brief was a simple, accessible interface where finding something you like takes as few taps as possible.

- ▶ Screens for discovery, weekly deals and personalised recommendations.
- ▶ Editorial type paired with generous product imagery to keep the browse experience calm.
- ▶ One clear action per card, so the path to a product is never ambiguous.

Agile Technology

Responsive interface – UI

A responsive interface for a tech product, designed as a system rather than a set of screens: the same components rearrange across sizes instead of being redrawn.

- ▶ Sign-up flow and product showcase, tablet through desktop.
- ▶ High-contrast layout splitting product imagery from the form, so the action always reads first.
- ▶ Component and spacing rules documented for handoff.

// 05 – ALSO IN PROGRESS

design meets code

Beyond Figma, these are live products where I did both the design and the build. Screens for these are being prepared – they are all public and can be visited today.

Activity Blog activityblog.vercel.app	Activity platform for online English classes. Admin panel to create and control sessions and track student progress, behind authenticated access.	React Supabase Auth Admin dashboard
Netianas netianas.vercel.app	Mobile-first site designed and built end to end, with a contact flow running on my own Node API deployed on Railway.	Visual design Node.js REST API Railway
VNS Matrix camilamihalyczo-dotcom.github.io	Immersive cyberfeminist web experience – art direction and interface built around a glitch aesthetic, with non-linear navigation.	Art direction Interaction design JavaScript

let's make something

Open to remote opportunities — full-time, part-time or freelance. Comfortable working with international teams in English or Spanish.
